

System-Wide

CHANGE: Add Button Terminology

You can now define the specific terminology of the Add button within the Work and Visitor pages under the Web Translations page within Gateway Admin.

FIX: Disable Contact Password Edit

This field found under Global in Gateway Admin, allows for the system to be configured to disable portal users from going in and changing their password.

FIX: Error Handling

Adjusted page design so that page errors no longer result in a white screen. Added a test to identify users known by the client's identity provider but not known to JXT. Users encountering this issue will now see an AwareManager error page with verbiage explaining that they are known to their IDp but not to our system.

CHANGE: SSO Precedence

Single sign-on now takes primary precedence in the loading order within Tomcat.
