

## System-Wide

### **CHANGE: Back button behavior**

There are two ways to navigate “back” through the application: the device’s Back button and the AwareManager link (  AwareManager ) in the top left corner of all screens. The application has been adjusted so the same navigational behavior occurs when either is pressed.

### **CHANGE: Changing the AwareManager URL**

Previously when the URL was changed during Sign In, the username/password last used was still displayed. Now changing the URL will clear out these fields.

### **NEW: Log out check**

If a user presses ‘Back’ to navigate backwards through the program, before they are taken back to the Sign in screen (and logged out in the process), they are prompted with a Yes/No message: “Are you sure you wish to log out?”

## Work

### **CHANGE: Add Work message**

When a new Work record has been successfully added, the pop-up message that appears now states “Work <Work Number + Division> has been added successfully”

### **FIX: Attaching pictures in offline mode**

Pictures attached to a Work record while in offline mode will now not show as duplicate images.

### **CHANGE: Date search**

The relative date options available when searching on any Work Date values has been extended to include Last/Next 60 Days and Last/Next 90 Days.

### **FIX: Duplicate search criteria on Tablet**

The issue of duplicate search criteria appearing on Android tablets has been addressed.

### **CHANGE: Free-form text fields**

Free-form text fields now have a purple underline to better distinguish them on all entry screens.

### **NEW: Persistent/mandatory fields**

When defining the Work fields to appear on your application, you can set any fields to be persistent and/or mandatory:

- **Persistent** – A persistent field will retain the previous value submitted each time you open a new Add Work screen. Note this only applies to Add Work.
- **Mandatory** – A mandatory field must be filled in on any entry screen. A mandatory designation applies to fields on both the Add Work and Edit Work screens.

### **NEW: Tasks**

When viewing a Work record linked to Tasks, a Tasks tab will appear. Clicking on this will take you to a list of all Tasks linked to the selected Work record. You can further click on individual Tasks to view their full notes.

### **FIX: Time order check**

During time entry, the application will not allow the user to set the *End Time* before the *Start Time*. If an invalid *End Time* is entered, it will automatically be adjusted to the *Start Time*.

### **FIX: Timer icon**

The timer icon should only appear next to a Work record in the Work List if the timer is currently running for that Work record.

### **CHANGE: Total number of records in the list**

When viewing the Work list, it will now display the total number of records currently visible in the bottom right corner.
